

Challenges: With their previous vendor, nationwide general contractor (GC) Boldt struggled with...

1-Misaligned management of workplace injuries

Most injured workers were referred off-site for treatment with minimal injury case management. A lack of coordinated injury care and case management resulted in higher than desired:

- Total recordable incident rate (TRIR)
- Lost time incident rate (LTIR)
- WC claim medical costs

2-No flexibility to meet site-by-site needs

Their previous vendor could not meet the needs of worksites by supplementing their telephonic nurse triage (TNT) with added services including:

- Telemedicine
- On-site staffing & drug testing

Safety managers spent unnecessary time finding vendors or internal solutions to health and safety needs.

Solutions: With CAREonsite, Boldt got quality solutions tailored to their needs

1-Expert management of workplace injuries

CAREonsite appropriately treated most injured workers on-site with evidence-based injury case management & physician oversight.

If off-site care or imaging were needed, peer-to-peer handoffs ensured the continuity of appropriate care and avoided unnecessary treatment.

2-Flexibility to meet site-by-site needs

CAREonsite tailored a variety of health and safety solutions to the needs of each location. Boldt safety managers had a single partner that helped save time & improve outcomes.

- **CAREonsite** = 24/7 TNT care (all sites) + telemedicine (as needed) + on-site medical staffing (as needed)
- **ASAPcheck drug solutions** = drug testing program

CAREonsite Results

Comparing 4 years before to 4 years after CAREonsite

67% reduction in off-site injury treatment helped:

Reduced
LTIR by
87%

Reduced
TRIR by
37%

Reduced
WC spend
by 50%

Flexible solutions saved Boldt's team 130 days of work over 4-years.

"Our partnership with CAREonsite has a tremendously positive impact on the management of our workplace injuries. Our employees are provided with appropriate, high-quality care without the time, cost, and likely recordability that we used to experience."

Scott Frazer, Vice President of Safety, Boldt
